One knob decides everything: the step size
10^{3}
10^{1}
10^{-1}
10^{-3}
10^{-5}
10^{-7}
loss $f(\theta_t)$
the hard edge is $\eta = 2/L$
$\eta = 0.02$: too small
$\eta = 0.90$: good
$\eta = 2.10$: diverges
