
$g_t = \nabla f(\theta_t)$
¿weight decay $\lambda > 0$?
sí
no
$g_t \leftarrow g_t + \lambda\theta_t$
$v \leftarrow \alpha \cdot v + (1-\alpha) \cdot g_t^2$
arrastra v
$\theta_{t+1} \leftarrow \theta_t - \eta \cdot g_t / (\sqrt{v} + \varepsilon)$
arrastra v
